

Loading Options:

✓ Side Loading

This application is suitable for vehicles with a low roof like a sedan so you can easily load your kayak from the side, pivoting the kayak over into position onto the other cradle with minimal effort.

The cradle adjusts to the shape of your kayak automatically with its' "self centering" pivoting feature. This product supports your kayak with 4 super strong glass reinforced nylon legs while making sure the kayak is cradled in comfort with its soft rubber pads protecting the hull.

A FREE pair of specially designed padded kayak straps are included.

Part # 560

Note: It is recommended that the kayak/canoe is secured front and rear with additional tie down straps.

✓ Rear Loading

This application is suitable for vehicles with a high roof like a 4WD so you can easily load your kayak from the rear by sliding it over the smooth rear polypropylene pads and into the front cradles with minimal effort.

The cradle adjusts to the shape of your kayak automatically with its' "self centering" pivoting feature. This product supports your kayak with 4 super strong glass reinforced nylon legs while making sure the kayak is cradled in comfort with its soft rubber pads protecting the hull.

A FREE pair of specially designed padded kayak straps are included.

Part # 561

Note: It is recommended that the kayak/canoe is secured front and rear with additional tie down straps.
