"The perfect balance between technology and creativity"

SwagmanTM

Rear Mounted Bike Carriers

The new Swagman range of rear mounted bike carriers available from Rhino-Rack, provides the ultimate in flexibility to accommodate today's wide variety of bike frame designs while still maintaining the simplicity of having a rear mounted bike carrier.

The **XP range** is available in 3 and 4 bike models with individually adjustable rotating cradles.

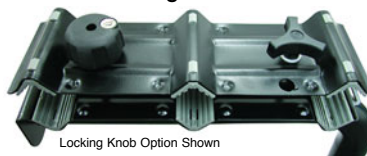

These cradles:

- Rotate to allow your bikes to be carried with the wheels level to the ground and provide greater ground clearance.
- The last cradle comes standard with a locking knob for added security.
- Are deeper and wider to accommodate up to a 2" frame tube.
- Have a soft kraton vinyl cushioning which is grooved for cables and provides a safe, scratch free ride for you bike.

XP Range

Standard Range

Locking Knob Option Shown

The **Standard range** is available in 3 bike models. They also have the unique soft kraton cushioning which is grooved for cables and provides a safe, scratch free ride for you bike.

Generous spacing between the large "V" cradles allows for easy loading and ample distance separating the bikes during transportation.

Like the XP range, these bike carriers have the option of lockable knobs.

The XP and Standard Range, with their rugged all steel construction coupled with their locking feature provides one of the strongest most robust products in the market today. Both ranges are available in standard towball or 2" hitch style mounting applications.
